Axum

AXUM SECURITY · MICROSOFT 365 & AZURE SECURITY

CAPABILITIES STATEMENT

Haile Holdings LLC

COMPANY OVERVIEW

Axum Security (Haile Holdings LLC) is a Virginia small business that secures and manages Microsoft 365, Azure and Google Workspace environments for small government contractors and federal IT teams. We configure identity, email, endpoint and cloud controls hands-on, document them, and leave clients with a tenant they can operate and defend in an assessment.

We support prime contractors as a subcontractor for M365 and Azure engineering tasks, and support small defense and civilian contractors directly with security hardening and managed IT.

CORE COMPETENCIES

+ **Microsoft 365 security hardening:** Exchange Online protection (SPF, DKIM, DMARC, anti-phishing, transport rules), SharePoint and OneDrive sharing controls, Defender for Office 365, audit logging and retention.
+ **Identity and access (Entra ID):** MFA and phishing-resistant authentication, Conditional Access design, privileged role cleanup, guest and app-registration review, sign-in risk policies.
+ **Azure cloud administration:** subscription and resource governance, RBAC, Azure Policy, network security groups, Defender for Cloud recommendations, logging to Log Analytics.
+ **Endpoint management and patching:** HCL BigFix patch and compliance baselines, Intune device configuration and compliance policies, software deployment and inventory.
+ **Google Workspace administration:** security settings, 2-Step Verification enforcement, sharing policies, and migrations between Google Workspace and Microsoft 365.
+ **CMMC and NIST SP 800-171 implementation support:** mapping M365 and Azure settings to 800-171 control families, helping clients build SSP and POA&M content, and preparing technical evidence for their assessments. We implement controls; we do not certify or assess compliance.
+ **Managed IT for small contractors:** tenant onboarding, user lifecycle, license management, backup configuration, and documented runbooks.

DIFFERENTIATORS

+ **Practitioner-led:** engagements are led hands-on by a working systems engineer, backed by 15+ years of combined enterprise IT experience across our network of IT professionals in BigFix, Azure, Entra ID, Exchange Online, Google Workspace and M365.
+ **Microsoft-first focus:** clients harden the platforms they already pay for before buying new tools.
+ **Assessment-ready documentation:** each change is recorded with screenshots, settings exports and a control mapping the client can hand to an assessor or prime.
+ **Flexible, low-overhead subcontractor:** small, well-scoped tasks, surge support, and evening or weekend change windows.
+ **National Capital Region:** U.S. citizen personnel, available for on-site work in DC, Maryland and Virginia.

COMPANY DATA

Legal name	Haile Holdings LLC
DBA	Axum Security
State	Virginia
UEI	UJUGJJCKLX46
